Evening Brief

Date: Monday September 24th, 2018

Weather Summary

***** High Risk for Gusty Winds and Low RH for portions of Wyoming on Wednesday *****

We should see a steady warming and drying trend over the next several days. On Tuesday, winds will be lighter but warmer and drier across the area, with the greatest increase in temperatures across western Nevada.

Winds will increase again Wednesday in the north, with wind speeds reaching critical levels across western Wyoming. With existing fires, gusty winds, critically dry relative humidity values, and record high ERCs, a high risk has been issued for western Wyoming on Wednesday.

Near critical winds again by the end of the week, followed by increasing moisture into our northern areas, possibly with some rain by this weekend as a Pacific storm system approaches.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4
National	2

Light Initial Attack Activity
GB New Fires and Acres: 7 fires 4.1 acres; 10,072 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been updated and issued for [Northern Great Basin](#)

Fuels/Fire Potential

The current 3-4 week dry period across the region has resulted in near record dry dead fuels across most of Utah, Nevada, Southern Idaho and Western Wyoming. Most ERC's in these areas are in the 80th-97th percentile, and even those near the 80th percentile are near peak mid-summer normals, as well as near records for this late in the year. Further north, across the northern Payette and Salmon Challis forests, ERC's are closer to late September normals, and should even moisten up slightly in the next few days.

Live Fuels (Sagebrush) remains near record dry levels, 60-80% across most of Utah/Nevada and far southern Idaho. This, combined with heavy fine fuel loading from the past 2 winters from northern NV/UT and far southern ID, will make large fire growth possible during any ignitions that coincide with moderate or higher wind days.

A warming/drying trend begins region-wide this week. This will keep fuels near current, record levels for many areas, and rapidly dry fuels in far northern areas that briefly moistened recently. More widespread fuel moistening is possible later this weekend into much of next week, if current weather models verify.

Resources

Aviation within the Great Basin

- o 3 VLAT's, 9 LATs, 4 CL-415's
- o 19 SEATs, 4 Fire Bosses
- o 16 Type 1 Helicopters / 15 Committed
- o 12 Type 2 Helicopters / 12 Committed
- o 23 Type 3 Helicopters

Crews Committed within the Great Basin

	Committed	Timing Out in 3 days	% Timing Out
